

Dormy Privacy license

What data do we collect:

Dormy does not perform any system analytics in the background, and does not store any identifying information that you do not explicitly provide which includes but is not limited to: cookies, IP address, or device settings. Dormy is committed to only collecting data that you provide while interacting with the application. Examples of data that Dormy collects include login and authentication details, posts made to the platform including but not limited to: rideshare posts, messages, housing listings, and any other identifying information gathered from any user made posting to the platform. Dormy does ask for access to a user's camera and photo library in order to provide photo listing functionality. Access to a user's camera and photo library can be declined but users will not be able to use Dormy's photo upload functionality for housing posts and listings. If changes to our data collection policy change Dormy will notify users upon entering the app. Users will have the option to decline future policy changes but their profile, identifying information, and other data collected before the policy change will still be stored by Dormy.

How do we collect your data:

All the data stored on Dormy servers is explicitly provided by the user by using text fields, image fields, or any other means that Dormy uses in its front-end code. Dormy can also receive any data the user provides using their email by sending an email to us at the address: dormyproject@gmail.com or any other addresses that Dormy uses and a user sends an email to.

How we use your data:

Dormy strives to use your data only to provide the best user experience. We do not sell or share your data with any outside entities. Dormy uses your data to provide a seamless interaction with other users on our platform and reach our mission of making housing, rideshare, and renting easier for our users.

Marketing:

Currently Dormy does not have any marketing functionality. This is however subject to change in the future and users might not be notified of marketing functionality. Please be assured that marketing will not be targeted by using your personal identifying information and it will not be sold or used by outside marketing entities. Dormy does use Google's Firebase application which includes services including Firebase Cloud Messages. Currently, Dormy does not utilize Firebase Cloud Messages but this is possible to change in the future. Please note that any Firebase Cloud Messages sent to your device will be done by the Dormy Development group to notify of any changes or new features in our application and should not be mistaken for user targeted marketing. This functionality will potentially be used in the future to enhance the user experience and policy changes are subject to occur.

Privacy Policies of Other Sites:

Please note that Dormy utilizes Google's Firebase database storage to keep track of all essential information to make our application work. For more information on Firebase's privacy policy and data usage please visit: <https://firebase.google.com/support/privacy>

How do we protect your data, what are your rights:

All passwords, and other sensitive information is stored encrypted in our database. No other user, nor Dormy employees/developers will be able to view this sensitive information. Current state of the art technology allows passwords to be salted hashed. This makes it practically impossible for database breaches to reveal sensitive information such as your passwords.

Your right is to ask for your data to be permanently deleted from our servers. You can do this currently by sending an email to us at: dormyproject@gmail.com or any other email address that is registered with Dormy. Once you send us an email, rest assured, we shall permanently delete all of your data, and you will receive confirmation of your data being permanently deleted.

How to contact us:

You can contact us by sending an email to the following email address: dormyproject@gmail.com. Dormy may update these addresses in the future without any prior information conveyed to the user about these changes.
