

Dormy is a student targeted app that focuses mostly on a student's end of the (semester/year)'s needs. The app targets the following areas:

The app addresses the following needs that students commonly face at the end of the semester / year:

Housing: The app will allow the user to filter through different housing options such as Sub-leasing and Renting options). It will also allow the user to filter the posts in question by any combination of: period of sublease/rent, price per month, location, and gross square footage/meterage.

Ride-sharing: A common need that a student faces at the end of each semester is finding someone to share an Uber/Lyft ride with to the airport or a transportation facility. The app will allow the user to filter through 'posts' by any combination of: date~time, source, destination, and number of fellow passengers.

Chatting: The app will also allow a one-to-one chat communication option whereby the user will be able to communicate with another user through text and/or images.

Roommate-matcher: As many students progress from one year to another, a lot of students struggle to find a compatible roommate. The app will help you filter through potential roommates who provide their roommate preferences. You will then be able to chat with a potential candidate.

Marketplace: The app will also list posts of user's looking to sell items with a possible image and the price of the item(s). You can then directly contact the seller to enquire more about it

In addition to this, the app will also include a user profile page which will include basic information about the user (for instance, contact information if the user chooses to share this publicly) and a timeline of all posts the user has created.

The poster includes the different sections of the app as discussed above.
